Immunogenic compsn. for producing anti-human gastrin 17 antibodies - used for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal ulceration or cancer.
                                                                                                                                                                                 treating gastrointestinal malignancy, and non-gastrointestinal tumors to act as a property and such as thyroid and lung cancer; or GRH or hCG immunominic peptide is useful as contraceptive and for treating cancers in male and female reproductive systems. The present sequence comprises a G17 peptide linked to a spacer peptide at the C-terminal end.
                 The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) accomprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH892106 to ADH89213 and ADH89223), gastrin G-34 (ADH89217-ADH89219), gonadotropin releasing hormone (GARH) peptide (ADH89220 and ADH89222 and ADH89225). (I) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human gastrin 17; antigenic peptide hG17(1-9)-Ser9; immunisation; treatment; gastro-oesophageal reflux disease; gastric; duodenal; ulceration; cancer.

composition values to the learness of graphs of graphs that comparises anti-gastrin antibodies, which bind to composition which generates anti-gastrin antibodies, which bind to composition which generates anti-gastrin antibodies, which bind to composition which generates anti-gastrin antibodies, which bind to a gastrin, in a patient; and administering histamine H2 antigodist or a controlling acid output by the stondach. The therapy is less costly, High controlling acid output by the stondach. The method permits a reduced dosage undesirable side effects are reduced. The method permits a reduced dosage undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the cf. acid production stimulating level (gastrin). Reduction of dosages is continued by occasional booster shots while gastric acid can be maintained by occasional booster shots while gastric acid can be maintained by occasional booster shots while gastric acid cinhibitor dosing is reduced. Immunization allows a sufficient time for inhibitor dosing is reduced. Immunization allows a sufficient time for inhibitor dosing is reduced. Immunization allows a sufficient time for present sequence represents a human heptadecagastrin (G17) immunomimic present sequence represents a human heptadecagastrin (G17) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the treatment of gastroesophageal reflux disease

Sequence 16

AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, sueed to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administering to a patient an immunogen which induces antibodies in the patient against peptide hormone gastrin 17 (G17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced tumour or pre-cancerous lesion of the lung, liver or oesophagus. ABP73032-35 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-

G17 or G34. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gastroesophageal reflux disease, GERD; gastrin, anti-gastrin antibody;

The invention relates to the treatment of gastroesophageal reflux disease CC (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H_2 antagonist or a gastrin, in a patient; and administering histamine H_2 antagonist or a controlling acid output by the stometh. The therapy is less costly. High cc controlling acid output by the stometh. The method permits a reduced dosage is associated with standard therapies are neutralized and card reducing agent both at the acid producing level as well as the cc acid reducing agent both at the acid producing level as well as the cc acid reducing agent both at the acid producing level as well as the cc acid production stimulating level (gastrin). Reduction of dosages is acid production stimulating level (gastrin). Reduction of dosages is can be maintained by occasional booster shots while gastric acid can be maintained by occasional booster shots while gastric acid cinhibitor dosing is reduced. Immunization allows a sufficient time for inhibitor dosing is reduced. Immunization allows a sufficient time for completely heal and no surgery is required. Sequences the esophagitis to completely heal and no surgery is required. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients patients particularly those with pernicious anemia, those receiving treatment with particularly those such as proton pump inhibitors (particularly omeprazole anti-ulcar agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H 2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a human having colorectal immunogen which is used to illustrate the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunogenic; treatment; hypergastrinemia; gastrin G17; gastrin G34;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administering to a patient an immunogen which induces antibodies in the patient against peptide hormone gastrin 17 (G17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced runnur or pre-cancerous lesion of the lung, liver or oesophagus. ABP7302-35 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating cancerous or pre-cancerous conditions of the lung, esophagus or liver, by administering an immunogen which induces antibodies in the patient against G17 and/or cholecystokinin-B/gastrin receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cancer; lung; oesophagus; liver; immunogen; hormone; gastrin 17; G17; gastrin receptor; cholecystokinin-B; CCK-B; Barrett's condition; gastrin-induced tumour; immune response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel pharmaceutical compositions for passive immunization. The compositions comprise monoclonal antibodies for the human hormone gastrin (G17 and G34) which selectively bind and neutralize gastrin, and a pharmaceutical inert carrier. The hormone gastrin has two main functions: stimulation of acid secretion and stimulation of gastrointestinal tract cell growth, and exists in two forms: heptadecagastrin (G17) and tetratriacontogastrin (G34). The compositions are useful for preventing or treating ulcers, e.g. duodenal and gastric ulcers or tumors whose growth is dependent on or stimulated by gastrin hormones. Peptides ADY37666-ADY37665 were used in an example from the invention for the induction of specific immune responses to gastrin. The present sequence is a fusion peptide comprising a fragment of human G17 and a spacer peptide.
                                                                                                                                                                                                                                                   Cytostatic, Gastrointestinal-Gen.; Antiulcer; Vaccine; pharmaceutical; hormone; gastrin; heptadecagastrin; ulcer; duodenal ulcer; stomach ulcer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New pharmaceutical composition for passive immunization comprising anti-
human gastrin G34 or anti-hunt gastrin G17 monoclonal antibodies, useful
for preventing or treating ulcers or tumors.

G17 or G34. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                         Immunogens against gastrin peptide(s) - used to induce antibodies that specifically neutralise single form of gastrin, G17 or G34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic, Gastrointestinal-Gen.; Antiulcer; Vaccine, pharmaceutical;

The present invention relates to novel pharmaceutical compositions for passive immunization. The compositions comprise monoclonal antibodies for the human hormone gastrin (G17 and G34) which selectively bind and care the human hormone gastrin (G17 and G34) which selectively bind and neutralize gastrin, and a pharmaceutical inert carrier. The hormone gastrin has two main functions: stimulation of acid secretion and casting the forms: heptadecagastrin (G17) and terrariscontogastrin (G34). The compositions are useful for preventing or treating ulcers, e.g. duodenal compositions are useful for preventing or treating ulcers, e.g. duodenal compositions are useful for present sequence is a fusion peptide comprising a fragment of human G17 and a spacer peptide. This sequence was used to demonstrate that a polymerised peptide immunogen can be constructed and used to reduce anti-G17 antibody responses. This peptide comprises a cuinque epitope for G17 (residues B and 14).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecules with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin TDK 2 peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Akresteijn GJ, Hensen EJ, Scibelli A, Van Der Most RG, Meloen RH;

The invention relates to a pharmaceutical composition (I) comprising a castrin compound (CI) having an extended activity upon administration to casualize in comparison with native gastrin. (I) or CI is useful for reacting a subject having diabetes, which involves administering CI or a cataing a subject having diabetes, which involves administering CI or a confided gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than circamparation of a native gastrin. The method further involves measuring a physiological indicator of islet neogenesis, consouring fasting blood glucose (FBG), and decreasing insulin dependency. The modified gastrin comparises a sequence of native gastrin capable of confidence of it is not comparised to the gastrin comparison of a main of terminal cysteine or binding to the gastrin serum level compared with the serum level of circampared with the serum level of compared with the serum level compared with the serum level of administering CI. (I) Contains gastrin compositions having an anino acid sequence of antive gastrin, which involves administering CI. (I) Contains gastrin compositions having longer active circulation in a subject. This sequence corresponds to amino acids 1-11 correction than native gastrin in the invention. (I) or corresponds to amino acids 1-11 correction than native gastrin in the invention using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                Antigenic fragments may be attached to an immunogenic carrier and used to raise Abs to a specific single form of Gastrin ie. G17 or G34. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                   Immunogens against gastrin peptide(s) - used to induce antibodies that specifically neutralise single form of gastrin, G17 or G34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                Antigenic peptide fragment selected from the 12 N-terminal AAs of heptadecagastrin (G17).
                                                                                                          Gastrin; tumours; peptic ulcers; diptheria toxoid; tetanus toxin.

gastrin precursor [validated] - cat

N;Contains: big gastrin (gastrin-34); gastrin

C;Species: Felis silvestris catus (domestic cat)

C;Species: Felis silvestris catus (domestic cat)

C;Species: Felis silvestris catus

C;Species: Felis silvestris catus

C;Species: Felis silvestris

C;Accession: S14401; A01621; A61074

R;Kim, S.J.; Uhm, K.N.; Kang, Y.K.; Yoo, O.J.

DNA Seq. 1, 181-187, 1991

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                            -i. SUBCELLULAR LOCATION: Secreted.
-i. PTM: Two different processing pathways probably exist in antral G-cells. In the dominant pathway progastrin is cleaved at three sites resulting in two major bloactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-71.
                                                                                                                                                                                                                                                                                                                            gastrin-6 in humans.", Physiol. 279:6909 (2000).
Am. J. Physiol. 279:6909 (2000).
-!- PUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its dispessive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.
                                                                                                                                                                                                                                                PROCESSING, AND SULFATION OF TYR-87.

Nature 204:933-934(1964)

I.E. FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its adjective enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Agarwal K.L., Noyes B.E.; "Studies on gastrin mRNA structure using an oligonucleotide probe."; Ann. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                    (without alignments)

RESULT 13
US-08-488-351A-75
is Sequence 75, Application US/08488351A
is Sequence 75, Application US/08488351A
is Patent No. 584346
is GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
is APPLICANT: Ladd, Timothy
it TITLE OF INVENTION: Immunogenic LHRH peptide constructs
it TITLE OF INVENTION: Immunogenic LHRH peptide constructs
is TITLE OF INVENTION: Immunogenic LHRH peptide C
                              APPLICANT: Ladd, Anna
APPLICANT: Wang, Chang Yi
APPLICANT: Wang, Chang Yi
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCES:
